

KEI MCCALL-POHL

<https://github.com/oh-kei>

I am a Computer Science student who values discipline, constructive criticism and continuous improvement. Interested in ambitious solo projects, to know and push my own limits, as well as someone eager to learn from others.

Education

Hong Kong University of Science and Technology - Graduation in 2028 with an Academic Scholarship.

BEng in Computer Science with an Extended Major in Artificial Intelligence

Rugby School Thailand - Graduated in 2024 with an Academic Scholarship.

Skills

Languages & Libraries: Python, C++, TypeScript/JavaScript, SQL, NumPy, TensorFlow, Pytorch, Pandas, Scikit-learn

Tools: Git, PostgreSQL, Supabase, REST APIs, JWT, OAuth, Netlify

Work Experience

Veronitech - Software Engineer

(January 2026 - September 2026)

- Developed a responsive company landing page from scratch for a hospitality-tech startup using React, Vite and Tailwind CSS, deployed via Netlify. veronitech.co
- Redesigned and enhanced the dashboard, improving both UI/UX and integration with backend systems.

Mariners Market's - Web Developer

(February 2026 - May 2026)

- Independently developed and deployed an e-commerce platform for an international sailing-products distributor using Next.js, Medusa 2.0 and TypeScript. marinersmarkets.com
- Built key storefront functionality including product customisation, bulk ordering and Google OAuth authentication. Integration of Resend, Stripe, MinIO, all hosted on Railway.

Camp Leader - Wisdom Camp

(June-July 2024,2025,2026)

- Summer camp for ages 7-12 in Thailand, helped teach children robotics, coding and problem-solving skills.
- Managed a team of 5 adult staff and 30 children, coordinating activities, delegating responsibilities and developing strong leadership, communication and team-management skills.

Private Tutor

(December 2024-June 2025)

- Prepared lessons for iGCSE Computer Science and Maths
- Taught student in Thailand remotely whilst at University in Hong Kong
- Computer Science grade went from U to C

Projects

UniMatch

- Co-developed a social networking app for university students in Hong Kong, with over 2500 active users
- Frontend utilised React Native, Expo and Type Script
- Backend utilised Supabase and Postgre SQL
- Alongside other functions such as email verification logic and JWT authentication

Neural Network built from scratch

- Built using Python and NumPy, with no machine learning frameworks used.
- Trained to identify handwritten digits 0-9
- Built a tkinter interface, allowing user-input and testing

Achievements/Hobbies

HKUST Dean's List, Fall 2024 — 4.0 GPA

Best in Southeast Asia, AS-Level Physics

A* in A-Level Mathematics, Further Mathematics and Computer Science; A in Physics

Penultimate Round, Hack The East Hackathon

Volleyball, Hiking, Trail Running, Powerlifting, Calisthenics, Reading, Pickleball.
